

New Non Operative Treatment for Dupuytren's Contracture of the Hand

Many patients develop permanent contractures of their fingers associated with a band or "cord" of scar tissue in their palms. This is called Dupuytren's disease and is usually treated with a straightforward surgical removal of the cord. **XIAFLEX** has been introduced as the first nonsurgical option in patients with a palpable cord. The enzyme in **XIAFLEX** weakens the cord, so that it can be released manually 24 hours later without surgery. This may require more than one injection session and there is some post injection swelling and discomfort. This procedure may be an alternative to surgery.

For more information, please go to www.mycosmeticsurgeon.md/xiaflex-dupuytren.html

You Are Invited to an Informative FREE Seminar

DATE:

Wednesday, December 8 at 6:00 PM

TOPIC:

"Plastic Surgery Recovery – Real Patient Stories"

SPEAKER:

Patients and Staff of Dr. Richard Greco

LOCATION:

5361 Reynolds Street

Please call (912) 355-8000 to reserve a seat for our upcoming seminar.

A gift certificate for a "free" cosmetic consultation will be given to all attendees and Door Prizes will be awarded!!!

What to do when Botox and Fillers Just Don't Do Enough?

The doctors at The Georgia Institute For Plastic Surgery have been helping patients reduce their wrinkles and minimize their "signs of aging" with a conservative non-operative approach that includes skin care (Obagi) and a combination of the most up to date products available. We are usually able to solve these issues without surgery, and for most – we can postpone when our patients feel like they need to progress to surgical intervention. When the excess skin and sag require surgery, we can individualize a plan for you that will evaluate each part of your face, and give you recommendations for possible improvements to consider. Our surgeons have a combined experience of over 90 years of practice to help give you a natural, refreshed new you.

Our patients love the computer software program "Mirror Image" that allows us to show them what they might look like with surgical changes. Our Ambulatory Surgery Center is private, safe and offers a great surgical experience for our patients and is also Medicare approved. We have some of the most experienced and caring nurses that take compassionate care of our patients for any length of stay that may be required.

Aging Eyes – The First Sign of Aging

The first sign of aging in most people is either some slight wrinkling of the skin around the outer edges of the eyes or some loose skin of the upper eyelids. Botox or Dysport will usually solve the slight wrinkles, while upper eyelid surgery is needed to solve the loose skin of the upper eyelid. People often ask, "When should I have my upper lids done?" The answer is, "It should only have to be done once; when it bothers you enough, you should do it! That way you can enjoy the results longer." Eyelid surgery is done as outpatient surgery and most patients are up taking care of themselves the next day. Sutures are out in five days and most people are back to their normal lives in five to ten days.

How Do You Solve the Loose Skin of My Neck?

Some individuals only have loose skin of the neck and are not ready for a "facelift." We can solve these problems with a "necklift." All of the scars are behind the ear and the recovery time is normally five to seven days.

AFTER

Do I Have to Have a Complete Facelift?

Everyone has a different idea of what a complete facelift involves. Some people think it includes a brow lift, upper and lower eyelid surgery, neck lift, AND facelift. Others believe it only involves the neck and cheek area. At The Georgia Institute For Plastic Surgery, we believe in doing only what you actually need. We will take the time to review each part of your face with you. This way, we can decide together what the best plan is for you.

If your doctor says Latisse™ is right for you, get up to \$100 off Latisse™ solution, when you qualify for and receive any Botox or Juvederm (offer good until 12/31/2010)

\$100.00 off when you purchase two syringes of Restylane (offer ends 12/31/2010)

Be Ready for the Holidays
Compliments of Dysport®
\$50 savings Nov. 1-Dec. 31

This holiday season, everyone's talking about Dysport, a botulinum toxin type A prescription injection used to temporarily improve the look of moderate to severe frown lines between the eyebrows (glabellar lines) in adults less than 65 years of age. To find out more about Dysport, visit www.DysportUSA.com or ask your healthcare professional.

Isn't it time for you to Discover Dysport and save \$50? Offer good on treatment with Dysport. See offer terms and conditions below. To learn more and register for this offer, visit www.DysportUSA.com!

THINKING OF A CHRISTMAS PRESENT FOR YOUR LOVED ONES?

You can purchase a gift card from The Georgia Institute For Plastic Surgery! Stop by our office at 5361 Reynolds Street or call 912-355-8000 or 1-800-260-7135 for more information.

When Do I Need a Browlift?

Some individuals have just a little sagging or heaviness on the outer edges of their eyebrows. We can solve this with a brow tacking procedure under local anesthesia. If you have significant wrinkles between your brows, and your forehead sags in both the middle and on the sides – an endoscopic browlift may be the answer. By using the endoscope, we limit the actual incisions needed to solve these problems.
